

The next step, accounted for.

A follow-up ledger for the days after discharge.

Shivam Gupta

Founder & builder / Built with AI-assisted development

Why this matters

Leaving hospital can leave unfinished work: a pending result, a repeat test, or a referral. In a 2005 study of 2,644 discharges at two academic hospitals, 41% of patients had results return after discharge.¹

What the MVP does

Review the source. Paste text or import a text PDF. Model and rules suggest tasks. Inspect every sentence, including omissions.

Name the tracker. Confirm each follow-up, the person tracking it, and any date. Unclear source details remain visible.

Record the ending. Result receipt stays separate from user-reported clinician review. The history retains the reported outcome.

A plan people can use

Save the edited demo to an account. Briefs include unconverted source text. Calendar/JSON exports keep the record portable. Anita and Maya are fictional.

Historical evaluation

On **20 known synthetic documents**, **33 of 34 proposals** matched annotations (97.1% precision), and **33 of 44 expected actions** were found (75% recall).

Known fixtures reused during fixes, not held-out or clinical validation. No measured model improvement over rules alone.

A business to test

First buyer hypothesis: a primary-care or transitions coordinator already chasing discharge follow-up.

\$149/month for 100 care episodes is a pricing hypothesis. Measure preparation time, corrections, and willingness to pay.

Built for a narrow workflow

Model and workflow run in the browser. Firebase provides hosting, sign-in, and saved plans. **57 live Firebase checks passed.** Owner isolation and persistence were verified. No paid inference API or proven health benefit.

Prototype tested with synthetic data. Patient deployment requires clinical and security review.

¹ Roy et al., *Annals of Internal Medicine* (2005). Historical two-hospital finding, not a current global estimate.

Workflow context: [2025 SAFER Test Results Reporting and Follow-Up Guide](#). This does not endorse Looplight.
